How Do I Keep the Current Cases we Have Clean and Sanitary?

We recommend sanitizing your cases with cleaning solutions or wipes. Make sure to wipe them down thoroughly between uses. We ran some testing with different wipes and here's what we recommend:

01

Preparation:

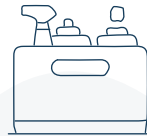

Before cleaning, make sure to turn off and unplug any electronic devices housed in the cases. This will prevent any potential damage or electrical hazards.

02

Cleaning Solutions:

You can use a variety of cleaning solutions to sanitize the plastic cases. Some options include isopropyl alcohol, diluted household disinfectants, or Clorox Disinfecting Wipes.

03

Wiping Down:

Moisten a clean, lint-free cloth or disinfectant wipe with the chosen cleaning solution. Gently wipe down the exterior surfaces of the plastic case, paying attention to areas that are frequently touched or prone to collecting dust. Avoid excessive moisture, especially around ventilation openings or sensitive areas.

04

Thoroughness:

Ensure that you thoroughly clean all sides, corners, and edges of the case to remove any dirt, grime, or germs. Take care not to apply excessive pressure or scrub aggressively, as it may scratch or damage the plastic surface.

05

Drying:

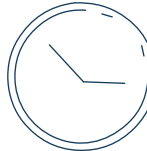

After wiping down the case, allow it to air dry naturally. This will help prevent streaks or residue from forming. Avoid using heat sources or direct sunlight to speed up the drying process, as excessive heat can deform or warp the plastic.

06

Frequency:

It is recommended to clean the plastic molded cases regularly, especially in high-traffic or shared environments. The frequency of cleaning will depend on the usage and surrounding conditions, but a weekly or bi-weekly cleaning routine should be sufficient in most cases.

07

Don't use:

window cleaners, household cleaners, aerosol sprays, solvents, ammonia, abrasives, or cleaners containing hydrogen peroxide.
